

## **Project Name:** Hostlinea Template

**Navbar-1:** Anchor tags are used for the content.

Span tag is used to highlight the particular word “**Register**”.

Image tag is used to indicate country flag.

Icon is used to indicate the dropdown for countries

**Navbar-2:** Vertical align property is used to place the content vertically middle to image and anchor tags are used for remaining content.

**Section-1:** Position property is used for small and large circles to place it on the rectangle at a particular place. h2 , p and button tags are used for the right side content.

**Navbar-3:** Flex property is used to make entire content in a single line.

By using margin property value as -1, both the input field and buttons are having no gap between them.

**Section-2:** Flex property is used by containing the entire content in four divs. **Issue:** If padding is applied inside the div then background color is occurring for h2 and p, but not applying for the remaining space inside the div.

Entire hover effect is not applying on a particular div when cursor is placed.

**Section-3:** Flex property is used by containing the entire content in three divs. Left side and right side content is having sub divisions along with horizontal line. Span tag is used for heading and paragraph to get a margin from icon.

**Section-4:** Entire content is divided into four divs and in first and third div h2 , p and button tags are used. Remaining two divs are rectangles

**Section-5:** Second section in section 5 is divided into three divs and content is same in all the three divs except the background color and button color in second div.

**Section-6:** divided into two sections to display the variation for background colors. **Issue:** Unable to get the exact shape to get same circle like in the template.

**Section-7:** Flex property is used by containing the entire content in two parts and each part is having sub divisions to differentiate them with margin.

**Section-8: Issue :** Not able to get a content inside the rectangle box with proper padding.

**Section-9:** Flex property is applied to place five rectangles in a single line.

**Section-10:** Entire content is divided into four divs and flex property is applied for divs to obtain in a single line. **Issue:** not able to get proper space between rectangle and content in third div.

**Section-11: Issue:** Same padding is applying for all the rectangles and not able to get live chat background color and it is appearing same like rectangle length.
